KiranaVoice

A phone line that takes kirana orders when the shopkeeper cannot

Problem

Neighbourhood kirana business still happens over a phone call. A regular customer rings and reads out a list. The owner is usually busy weighing dal or giving change, so the call goes unanswered or the order gets half heard. A missed call is basically a lost order. The customer just calls the next shop.

Solution

KiranaVoice is a voice agent that answers the shop's phone when the owner cannot pick up. It talks to the customer in Hinglish, takes the order, reads it back for confirmation, handles corrections, and sends a clean order summary to the owner on WhatsApp. No app install, no behaviour change. The customer makes a normal phone call. The owner checks WhatsApp when free.

How it works

Gnani Prisma v2.5 realtime speech to text turns caller speech into a Hinglish transcript. A Pipecat pipeline with a rule based Hinglish order parser and state machine extracts items and quantities, handles unclear quantities, corrections and removals, and handles Devanagari numbers. Gnani Timbre v2.5 realtime text to speech speaks the read back. The finished order is sent as a WhatsApp summary. All data in the demo is synthetic.

Measured results

One full call ran end to end on the live API: Prisma to Pipecat to Timbre to WhatsApp, order correct. Prisma pooled word error rate about 0.15 on 3 small synthetic clips. Timbre time to first audio 1060 to 1223 ms, median about 1.1 s. Tests pass 16 of 16 in mock mode. One real kirana owner called the idea decent and said they might pay Rs 200 to 300 per month. That is one informal conversation, not a study.

Team

U. Kaustubha Karthik: built the working application, demo web app, Pipecat voice pipeline with Prisma and Timbre, Hinglish order parser, WhatsApp sender. Yash: produced and edited the 60 second demo video. Shared: the submission writeup.
